Introduction

NORTH CENTRAL FLORIDA CANCER CONTROL COLLABORATIVE

The mission of the North Central Florida Cancer Control Collaborative (NCFCCC) is to improve access to cancer care and reduce the burden of cancer on residents of North Central Florida. The NCFCCC target area includes 11 predominantly rural counties: Alachua, Bradford, Dixie, Gilchrist, Lafayette, Levy, Union, Putnam, Columbia, Hamilton, and Suwannee. In some of the most rural counties 21 percent of residents live below the poverty level and rates of uninsured residents are as high as 28 percent.

It is critical that rural settings become a focus of cancer control efforts since the epidemiological evidence is clear that rural populations experience disproportionately higher mortality rates from certain cancers. The highest cancer mortality rates in the state of Florida are concentrated in our target area.

Active NCFCCC members include safety net healthcare facilities (i.e., Federally-Qualified Health Centers, County Health Departments, rural health clinics, and a rural volunteer clinic), rural primary care practices, hospices, hospitals, and a variety of community stakeholder groups.

NCFCCC, with support from Florida Department of Health Cancer Control Program will work to promote effective strategies for preventing and controlling cancer and providing support to cancer patients, survivors and caregivers in our rural communities.

The NCFCCC serves as a networking, educational and community action venue for all who are committed to reducing the burden of cancer in north central Florida. NCFCCC seeks to provide the infrastructure and technical support to NCFCCC members to enhance the competency of stakeholders, especially in rural counties, to reduce the burden of cancer for their citizens through the development of a regional comprehensive cancer control program.

LEAD AGENCY

WellFlorida Council, Inc. is a private, non-profit organization designated by the State of Florida Department of Health as the lead agency for the North Central Florida Cancer Control Collaborative (NCFCCC) funding and coordination. As the fiscal agent and coordinator of the NCFCCC, WellFlorida Council coordinates quarterly meetings, continuing education unit opportunities, strategic planning, and maintenance of the NCFCCC website, blog, listserv and cancer resource guide.

The purpose of this report is to provide data to assist members of the NCFCCC in establishing priorities and strategic planning guidance for future cancer control activities in the NCFCCC Region.

Executive Summary

The Executive Summary provides a narrative summary of the data presented in the North Central Florida Cancer Report 2020. This includes a brief summary of cancer age-adjusted incidence rates, age-adjusted death rates, Behavioral Risk Factor Surveillance System data, cancer-related emergency room visit data and medical oncology discharge data. When data are available, a comparison is provided with the state of Florida. It is important to note that Alachua County is the most populous county in the NCFCCC Region while Union County is the least.

AGE-ADJUSTED CANCER INCIDENCE RATES

Age-adjusted incidence rates per 100,000 are provided in tables 1-18 by race and ethnicity for reported cancers, including breast cancer, brain cancer, cervical cancer, head/neck cancer, esophagus cancer, lung cancer, colorectal cancer, prostate cancer, oral cancer, non-Hodgkin's lymphoma, bladder cancer, oral cancer, ovary cancer, pancreas cancer, prostate cancer, stomach cancer and liver cancer.

The tables show incidence rates for the eleven counties the NCFCCC region, including Alachua, Bradford, Columbia, Dixie, Gilchrist, Hamilton, Lafayette, Levy, Putnam, Suwannee and Union counties and Florida. Overall, cancer incidence rates in the NCFCCC Region are relatively equivalent to the incidence rates for the state of Florida in every county except Union. According to the 2017 data, Union County has disproportionately higher cancer incidence rates than Florida (1264.6 and 441.9 respectively).

In regards to race, most NCFCCC Region incidence rates for Hispanics are lower than those for Blacks and Whites. This trend is also true for the entire state of Florida. Two counties that do not follow this trend are Dixie and Gilchrist counties, where the cancer incidence rate for Hispanics in Dixie was higher than for Blacks (211.2) and in Gilchrist (512.4) was higher than for Whites (492.8).

When looking at the top four cancers by incidence in the region (Lung, Breast, Colorectal and Prostate cancers), racial disparities emerge. Overall incidence of lung cancer in the NCFCCC region is very high compared to those of the state. Lung cancer incidence rates are particularly high in Union County (190.3) for all races compared to the state (56.4) and are particularly high for Blacks in Lafayette County (287.1) compared to the state for Blacks (43.8).

Breast cancer incidence in the NCFCCC region is higher for Whites than Hispanics and Blacks. County-specific numbers of breast cancer for Hispanics and Blacks were so small, they went unreported (see notes section for more details). The only exception to the above statement can be seen in Gilchrist county where the incidence rate for Blacks in 2017 was 88.6, whereas for Whites it was 61.7.

Colorectal cancer incidence rates are higher than the state incidence rates in all NCFCCC region counties except Columbia, Hamilton, Lafayette and Levy. The incidence rates in Union county for Colorectal cancer are extremely high for all races at 178.6 compared to the state rate for all races at 35.2.

NORTH CENTRAL FLORIDA CANCER REPORT 2020

Although the state incidence rates for prostate cancer for all races has been going down over the years (87.9 in 2017), the rates for Union County are going up and are very high for 2017 (349.0). For Blacks, this incidence rate is very high (1,761.2) compared to those of Whites (161.3) and Hispanics (556.1) in Union County. Dixie county is interesting, as its prostate cancer incidence rate gone down and is considerably lower than the state rate for all races in 2017 (19.3).

AGE-ADJUSTED TOP CANCER DEATH RATES

The age adjusted rates per 100,000 population for the top cancer type deaths in the state of Florida for all Races, Whites, Blacks, Hispanics, Males, and Females in each of the NCFCCC Region counties, the NCFCCC Region with Alachua County included, the NCFCCC Region without Alachua County included, and Florida are displayed in tables 19-24.

In the NCFCCC Region, the age adjusted death rate for all cancers (214.9) is 41% higher than in Florida (149.0). Compared to Florida (36.8), Lung Cancer age-adjusted death rate (68.0) is 46% higher in the NCFCCC Region. The NCFCCC Bladder Cancer's age adjusted death rate (6.4) is 30% higher than in the state of Florida (4.5).

The age-adjusted death rates for all cancers among Black NCFCCC residents at 214.7 is 39% higher than Florida's rate at 154.0. In Black residents in the NCFCCC Region, the age-adjusted death rate of cancer is higher in each cancer type listed except for Breast, Liver and Bladder cancers. Lung Cancer death rates are 13% higher in Black NCFCCC residents at 32.5 than Florida at 28.8.

In White NCFCCC residents, the age-adjusted death rates are higher in every cancer type listed. The age-adjusted death rate in all cancers is 45% higher in White NCFCCC Residents at 217.0 than Florida at 149.4. Additionally, in White NCFCCC residents, the age-adjusted death rate for Lung Cancer is 71% higher than the state (65.6 and 38.2 respectively).

The three cancer types with the highest rates of death are Lung, Breast and Prostate. For all races, the rate of death from Lung cancer in Union County (135.6) is very high when compared with the entire state (36.8). When looking at males and females in Union County, the Lung cancer death rate for males is 190.9 compared to 59.4 for females.

For Hamilton county, Breast cancer death rates at 40.0 are much higher than that of the state rates 23.9. In particular, breast cancer death rates are much higher for Blacks (88.1) residing in Hamilton county than for Whites (21.1). This is also true for Colorectal cancer death rates in Union county, where Blacks' rate of death is at 66.4 and where Whites' rate of death is at 43.0. Similarly, when looking at Prostate cancer death rates for all races in Dixie (23.2) and Levy (19.7) counties, the rates for Blacks are higher than other races at 172.3 and 89.2 respectively.

Although the top death causing cancers for Whites and Blacks in the NCFCCC region are Lung, Prostate and Breast cancers, the top death causing cancers for Hispanics are Lung, Prostate and Non-Hodgkin's Lymphoma. The death rate for Hispanics from Non-Hodgkin's Lymphoma at 16.8 is higher than that of Breast cancer at 14.4. Furthermore, Union county had the highest rates for Hispanics in all three of the cancer types out of all of the NCFCCC region.

BEHAVIORAL RISK FACTOR DATA (BRFSSS)

The Behavioral Risk Factor Surveillance System (BRFSS) is a state-based system of health surveys that collects information on health risk behaviors, preventative health practices and health care access related to chronic disease and injury.

Health behaviors not only contribute to health status, but they can be viewed as health outcomes unto themselves. Health behaviors are a major reflection of personal choice and they can often also be indicators or markers for health system performance.

The BRFSS survey was conducted among adults (over 18) in Florida in 2007, 2010, 2013 and 2016. The purpose was to compare health cancer screenings amongst selected adults. Tables 25-27 highlight selected BRFSS indicators for the 11 NCFCCC counties and the state of Florida.

When looking at typical contributing factors for Breast, Prostate and Colorectal cancer incidence, data regarding regular screenings for these cancers (mammogram, PSA test and colorectal screening respectively) can be analyzed for patterns that might help explain incidence trends. For example, when looking at the rates of “women 40 years or age and older who received a mammogram in the past year” every NCFCCC county rate except Gilchrist’s at 61.4 is below the state rate at 60.8. Similarly, when looking at the rates of “men ages 50 and older who have ever had a PSA test” every NCFCCC county rate except those of Lafayette (72.9) and Bradford (69.3) are below the state rate of 67.5.

CANCER-RELATED EMERGENCY ROOM VISITS (ED VISITS)

Tables 32-35 demonstrate the incidence rates of ER visits related to cancer by county, race, gender and age. The incidence rate of cancer-related ER visits in the NCFCCC Region from 2016-2019 was 97.4 and in the NCFCCC Region without Alachua County was 109.3, the latter of which is higher than the state incidence rate of 101.0 per 100,000. According to this data, in the NCFCCC Region with Alachua County, Black residents visit the ER more often than Black residents in the NCFCCC Region without Alachua County, whereas this is the opposite for White residents. In the NCFCCC Region with Alachua County and without Alachua County, females visit the ER due to a cancer-related illness more than males and residents 45-64 years of age are more likely to visit the ER than any other age-group.

MEDICAL ONCOLOGY

The medical oncology discharges by diagnosis-related group (DRG) for each of the NCFCCC Region counties, the NCFCCC Region with Alachua County included, the NCFCCC Region without Alachua County and Florida are identified in tables in this report. Tables 36-49 include the number of discharges, patient days and average length of stay (ALOS).

FUTURE INTERVENTIONS

Our region includes Alachua County, an area with several hospitals and an academic health science center surrounded by highly rural counties designated as health professional shortage areas. The residents of these rural counties are burdened by high rates of poverty and high rates of un-insurance. Although the actual numbers of new cancers and deaths from cancers in these counties are small, the comparison of incidence and mortality rates to the state as a whole show a picture of a continuing disproportionate burden of cancer in this region. Moving forward, a more detailed analysis of the cancer burden in these rural counties is needed.

NORTH CENTRAL FLORIDA CANCER REPORT 2020

The data reported here indicates that more detail is needed to more clearly define the burden of cancer deaths in the minority population of these rural counties. This suggestion stems from the data showing prostate and lung cancer are disproportionately affecting Blacks and Hispanics in the NCFCCC region. Furthermore, this data suggests that other cancers such as colorectal and oral cancers are also disproportionately affecting Blacks and Hispanics in the NCFCCC region. Ideally, future analyses would include a deeper analysis of cancer disparities by exploring cancer screening rates by insurance status, and the association of screening rates with new cancers and cancer deaths by race and ethnicity. In addition, increased stakeholder involvement in communities with high cancer incidence rates is also necessary. A more detailed analysis on the racial breakdown of cancer screenings coupled with increased stakeholder involvement in community public health will allow for a better understanding of why certain counties such as Union county have higher cancer incidence rates across the board, which in turn will help public health professionals better develop and tailor health interventions for these communities.

NOTES

Please note in the tables that if there is a dash (--), then there were no incidences for that particular type of cancer for that race or ethnicity for that particular year or not recorded because there were less than 10 cases.

Please note in the NCFCCC Region, every county but Levy County has a Department of Corrections Facility. Those facilities include work camps, correctional institutions, reception centers, work releases or state prisons. Reception and Medical Center (RMC) in Union County contains a licensed hospital that provides cancer treatments for the majority of prisoners. Prison deaths are included in the total death counts for each county.

All Cancer Incidence Rates
