Data Comparison Table Crosswalk

The data in this 2022 Lafayette and Suwannee Counties Community Health Assessment (CHA) Technical Appendix is organized by conventional categories that group indicators by common themes. Population health is complex and can be influenced by many intersecting factors, as such, an indicator presented in one category may also pertain to numerous topics. In addition, CHAs can align with and mutually inform other assessments and plans to better understand and address population health issues at the community, region, and state levels.

The tables below index CHA indicators by main and sub-categories with the social determinants of health, Health Equity data, and the Florida Department of Health's 2022-2026 State Health Improvement Plan (SHIP). Please refer to the table numbers listed to find the corresponding data set.

Social Determinants of Health

Although the American Community Survey(ACS) produces population, demographic and housing unit estimates for 2017-2021, the 2020 Census provides the official counts of the population and housing units for the nation, counties, cities, and towns. The American Community Survey is a sample of data taken over a time period and should not be compared to other sources of data.

Florida	21,339,762	415,438	1.9		

The group quarters population includes all people not living in households. Two general categories of people in group quarters are recognized by the Census: (1) the institutionalized population and (2) the noninstitutionalized population. The institutionalized population includes people under formally authorized, supervised care or custody in institutions at the time of enumeration; such as correctional institutions, nursing homes and juvenile institutions. The noninstitutionalized population includes all people who live in group quarters other than institutions, such as college dormitories, military quarters, and group homes. Also included are staff residing at institutional group quarters.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates for 2017-2021, the 2020 Census provides the official counts of the population and housing units for the nation, counties, cities, and towns. The American Community Survey is a sample of data taken over a time period and should not be compared to other sources of data.

A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householders family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates for 2017-2021, the 2020 Census provides the official counts of the population and housing units for the nation, counties, cities, and towns. The American Community Survey is a sample of data taken over a time period and should not be compared to other sources of data.

A household includes all of the people who occupy a housing unit. (People not living in households are classified as living in group quarters.) A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied (or if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and that have a direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living quarters.

Although the American Community Survey(ACS) produces population, demographic and housing unit estimates for 2017-2021, the 2020 Census provides the official counts of the population and housing units for the nation, counties, cities, and towns. The American Community Survey is a sample of data taken over a time period and should not be compared to other sources of data.

^{*} A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householders family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone.

Mortality

Florida comparison data is shown as well. Please note: this data should not be compared to the tables where zip codes are shown. The County numbers in the zip code tables might not match the county numbers in the previous tables due to different sources being used. The rates might be different as well due to different population source data.

^{*} The ranking of the causes of death in the table are based on the total number of deaths for Lafayette and Suwannee County and Florida is shown for comparison, for the time period of 2019-2021 for each type of race. Causes of deaths are shown for the top 5 by each race and for ethnicity as well as where they rank if they are in one of the top 5 by race or ethnicity.

If there is a "T" after the number then the total number of deaths is tied for those diseases.

The shorter names of the causes of deaths in ()'s above will be used in the rest of the tables in the appendix for the name for that particular cause of death.

Mental Health

TABLE 103. MEDICARE SEVERITY-DIAGNOSIS RELATED GROUP(MSDRGS) USED TO DEFINE THE HOSPITALIZATIONS FOR MENTAL HEALTH ISSUES.

MSDRG	Description
876	OR Procedure with principal diagnosis of mental illness
880	Acute adjustment reactions and psychosocial dysfunction
881	Depressive neuroses
882	Neuroses except depressive
883	Disorders of personality and impulse control
885	Psychosis
886	Behavioral & Developmental Disorders
887	Other mental disorders diagnoses
894	Alcohol/drug abuse or dependence, left against medical advice
895	Alcohol/drug abuse or dependence with rehabilitation therapy
896	Alcohol/drug abuse or dependence w/o rehabilitation therapy with MCC
897	Alcohol/drug abuse or dependence w/o rehabilitation therapy w/o MCC

Maternal and Infant Health

Various maternal and infant health data is presented at the zip code and county level over an extended time period. Ethnicity data is presented in the same tables as the data when broken out by race; please note however, that Hispanics are not considered a race but a subset of the races. Therefore, Hispanics should not be added in with the White and Black to get a total. Not all races are shown in the table, so the sum of these two may not equal what is shown in the total column.

COUNTY HEALTH RANKINGS

TABLE 176. COUNTY HEALTH RANKINGS FOR LAFAYETTE AND SUWANNEE COUNTIES COMPARED TO FLORIDA, 2022.

	Lafayette County	Suwannee County	Florida
HEALTH OUTCOMES (Rank of 67)	40	46	
Length of Life (Rank of 67)	34	43	
Years of Potential Life Lost Before 75 (Rate per 100,000)	8,682	9,705	7,478
Quality of Life (Rank of 67)	46	47	
Poor or fair health (Percent)	26.9	23.9	17.8
Poor physical health days (Average Number)	5.4	5.0	4.0
Poor mental health days (Average Number)	5.6	5.4	4.5
Low Birthweight (Percent)	8.1	9.3	8.7
HEALTH FACTORS (Rank of 67)	46	51	
Health Behaviors (Rank of 67)	43	44	
Adult smoking (Percent)	25.6	23.1	15.3
Adult obesity (Percent)	36.9	35.8	26.3
Food Environment Index	8.3	7.6	7.0
Physical inactivity (Percent)	36.4	31.8	25.9
Access to exercise opportunities (Percent)	41.1	46.9	86.9
Excessive drinking (Percent)	20.7	21.3	20.2
Alcohol-impaired driving deaths (Percent)	22.2	26.1	22.0
Sexually transmitted infections (Chlamydia) rate (Rate Per 100,000 Population)	296.8	529.1	515.9
Teen birth rate (Per 1,000 Female Population 15-19 Years of Age)	18.8	35.2	18.4

^{*90}th percentile, i.e., only 10% are better. Blank (---)values reflect unreliable or missing data. Source: University of Wisconsin Population Health Institute, County Health Rankings website http://www.countyhealthrankings.org, 2022.

TABLE 176 CONT. COUNTY HEALTH RANKINGS FOR LAFAYETTE AND SUWANNEE COUNTIES COMPARED TO FLORIDA, 2022.

	1 - 6	C	
	Lafayette County	Suwannee County	Florida
Clinical Care (Rank of 67)	64	63	
Uninsured adults (Percent)	19.6	17.0	16.4
Primary care physicians	8,422:1	8,883:1	1,372:1
Dentists	-	5,606:1	1,631:1
Mental health providers	8,482:1	1,495:1	546:1
Preventable hospital stay rate (Per 100,000			
Medicare Enrollees)	5,349.0	6,005.0	4,203.0
Mammography screening (Percent)	42.0	41.0	44.0
Flu vaccinations (Percent)	32.0	35.0	45.0
Social & Economic Factors (Rank of 67)	28	48	
High school completed (Percent)	73.2	82.5	88.5
Some college (Percent)	30.0	39.3	63.6
Unemployment (Percent)	4.2	5.6	7.7
Children in poverty (Percent)	27.7	28.3	17.2
Income Inequality (Ratio)	5.3	4.3	4.6
Children in single-parent households (Percent)	7.8	34.0	28.4
Social Associations rate (Per 10,000 Population)	17.8	8.3	7.0
Violent crime rate (Per 100,000 Population)	199.1	513.6	484.4
Injury death rate (Per 100,000 Population)	86.6	101.6	86.7
Physical Environment (Rank of 67)	50	21	
Air Pollution - Particulate Matter (PM 2.5) Per Day (μg/m³)	7.5	7.8	7.8
Drinking water violations (Presence of			
violation)	No	No	
Severe housing problems (Percent)	17.2	16.8	19.2
Driving alone to work (Percent)	90.1	78.5	77.7
Long commute - driving alone (Percent)	38.8	35.3	42.7
Diami. / Augliuge welfe et complie ble en maiorime de te

Technical Notes

2020 U.S. CENSUS DATA

The 2020 U.S. Census data provides the official counts of the population and housing units for the nation, counties, cities and towns. Due to the COVID Pandemic release of all of the 2020 data has been postponed therefore most of the data shown here in the technical appendix is from the latest 5-Year American Community Survey Estimates.

ALICE DATA

ALICE is an acronym for Asset Limited, Income Constrained, Employed. This United Way report provides information to help with the understanding of who is struggling in our communities. Please check out www.UnitedWayALICE.org for more detailed information.

AMERICAN COMMUNITY SURVEY DATA

The American Community Survey (ACS) data is released in one-year or five-year estimates depending on what level of data is shown. Traditionally, short forms and long forms were sent out to addresses every 10 years. The American Community Survey was designed to replace the long form and it is now sent to only a sample of the population once each year instead of every ten years so that ongoing estimates may be available. The ACS reports contain estimates, not the official counts. The U.S. Census states that you should not compare 2010 or 2020 Census numbers to ACS data; it also suggests that you only compare ACS data when the data are different sets of years. Therefore, to compare 2005-2009 ACS data you would not compare it with any other set until the 2010-2014 data is released. Individual sets of years of data for the ACS may be compared to each other. Please remember that the ACS data is not the actual count, rather, it is a sample of the population over the selected time period. For more detailed information on the American Community Survey please refer to https://www.census.gov/programs-surveys/acs/guidance/comparing-acs-data/2014.html.

Since previous data that was collected on the old long forms were not collected during the 2010 official counts, there is no data from that point for education levels and income information in the 2010 counts. The income information and education data estimates are shown from the latest ACS. In addition, various other data from the latest ACS are included in this report to show the latest estimates. To be able to show Zip Code Tabulation Area level data, data from the five-year estimates has to be utilized.

AVAILABILITY OF SERVICES

To show various services that are available to people in the county, rates are shown for the acute care hospital beds, nursing home beds, various types of doctors and dentists and dental services.

AVOIDABLE DISCHARGES/INPATIENT HOSPITALIZATIONS

Avoidable discharges are based on the ACS Conditions study done by John Billings. Only discharges for the less than 65 population are looked at. The codes are listed at http://wagner.nyu.edu/chpsr/acs codes.pdf.

AVOIDABLE EMERGENCY DEPARTMENT (ED) VISITS

Avoidable emergency department visits are based on the NYU Algorithm. ED visits are classified into four categories based on the NYU Algorithm: (1) Non-Emergent, (2) Emergent/Primary Care Treatable, (3) Emergent/Emergency Department Care Required but Preventable/Avoidable and (4) Emergent/Emergency Department Care Required Not Preventable/Avoidable. Therefore, the first three categories were combined to create the total number of Avoidable ED Visits. This data is based on all ED visits no matter what the age of the patient.

BEHAVIORAL RISK FACTOR SURVEILLANCE SYSTEM (BRFSS) DATA

The Florida Department of Health conducts the Behavioral Risk Factor Surveillance System (BRFSS) with financial and technical assistance from the Centers for Disease Control and Prevention (CDC). This state-based telephone surveillance system collects self-reported data on individual risk behaviors and preventative health practices related to the leading causes of morbidity and mortality in the United States. BRFSS indicators are summarized only at the state and county level.

BIRTHS

Various birth statistics and infant deaths are shown for the maternal and child data. Data by race is shown for comparison. Low birthweight births, teen birth rates, payor sources for deliveries and trimester of care services and when they were started are also shown for comparison. Data is shown by zip code levels when available. Rates are mostly based on per 1,000 live births unless stated as a percent of total births or per a specified population.

BUSINESSES

Data for business sizes and selected types are shown from the latest County Business Patterns produced from the U.S. Census Bureau.

COUNTY HEALTH RANKINGS

The County Health Rankings are a key component of the Mobilizing Action Toward Community Health (MATCH) collaboration project between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute. Counties receive a rank relative to the health of other counties in the state. Counties having high ranks, e.g. 1 or 2, are considered to be the "healthiest". Health is viewed as a ultifactorial construct. Counties are ranked relative to the health of other counties in the same state on the following summary measures:

- I. Health Outcomes--rankings are based on an equal weighting of one length of life (mortality) measure and four quality of life (morbidity) measures.
- II. Health Factors--rankings are based on weighted scores of four types of factors:
 - a. Health Behaviors (9 measures)
 - b. Clinical Care (7 measures)
 - c. Social and Economic (8 measures)
 - d. Physical Environment (5 measures)

For more detailed information please check http://www.countyhealthrankings.org/ranking-methods.

COVID-19

COVID data has been added to the technical appendix. The ICD-10 Code U07.1 was added in March of 2020. Therefore data is from that point on in this report. When pulling COVID data from the inpatient and emergency department visit data, all possible fields where this code could be found were pulled.

CRUDE VERSUS AGE-ADJUSTED MORTALITY RATES

Both the crude and the age-adjusted death rates (AADR) are displayed in this report. Crude rates are merely the actual number of deaths for a given cause for a desired population divided by total number in the desired population and then multiplied by 100,000 to get the rate per 100,000 population, while AADR represent crude rates adjusted to standardize the population distribution effects on the rate.

Although useful for certain purposes, the crude death rate as a comparative measure has a major shortcoming. It is a function of the age distribution of the population at risk. For example, the population at risk in one county may be primarily elderly persons ages 65 and older while the population at risk in another county may be primarily of persons ages 40 to 50. Crude rates are recommended when a summary measure is needed, and it is not necessary or desirable to adjust for other factors.

The frequency with which health events occur is almost always related to age. In fact, the relationship of age to risk often dwarfs other important risk factors. For example, acute respiratory infections are more common in children of school age because of their immunologic susceptibility and exposure to other children in schools. Chronic conditions, such as arthritis and atherosclerosis, occur more frequently in older adults because of a variety of physiologic consequences of aging. Mortality rates tend to increase after the age of 40.

Because the occurrence of many health conditions is related to age, the most common adjustment for public health data is age adjustment. The age-adjustment process removes differences in the age composition of two or more populations to allow comparisons between these populations independent of their age structure.

The age-adjusted death rate is a summary measure that eliminates the effect of the underlying age distribution of the population. The result is a figure that represents the theoretical risk of mortality for a population, if the population had an age distribution identical to that of a standard population. For example, a county's age-adjusted death rate is the weighted average of the age-specific death rates observed in that county, with the weights derived from the age distribution in an external population standard, such as the U.S. Population.

Age-adjustment then allows for the comparison of two distinct populations (for example, Hamilton County versus Florida) which most likely have differing age distributions. The age effects are in essence removed from the rates and the age-adjusted death rate then no longer reflects the actual death rate but is an indicator rate that can be used for relative comparisons.

In the past, the National Center for Health Statistics (NCHS) age-adjusted rates using the US 1940 standard population. Other agencies used the U.S. 1970 Standard. Beginning with 1999 data, federal agencies began age-adjusting to the U.S. 2000 Standard Million Population.

Zip Code level crude and age-adjusted rates are shown in a separate table and the county rates and Florida rates are shown as well. These data should not be compared to tables that have only county and Florida rates in them. Population sources are different, and these rates should not be compared.

DENTAL/ORAL HEALTH

Hospitalizations and Emergency Department (ED) Visits are shown for dental/oral health reasons. ICD 9 Codes 520-529 were used to pull the emergency department visits and the discharges due to dental/oral health issues for data up to September 30, 2015. All possible fields were used in categorizing these visits. The following ICD 9 Codes were used to categorize dental/oral health as preventable for data up to September 30, 2015: 520.5, 520.6, 520.7, 521.0, 521.1-521.8, 522.0, 522.1, 522.4-522.8, 523.0-523.9, 524.3-524.6, 525.1, 525.3, 525.9, 526.4, 526.5, 528.0-528.3, 528.5-528.7, 528.9 and 529.0. For data from October 1, 2015, and forward ICD 10 Codes K00-K14 were used to pull off data for dental/oral health reasons. From the same time frame, ICD 10 codes K02, K03, K04, K05, K060, K061, K062, K08, K12, K13, M276, A690, and K098 were the preventable dental/oral health issues.

EDUCATION LEVELS AND LANGUAGE SPOKEN AT HOME

The number of persons by level of school completed is shown as well as the language spoken in the home and how well English is spoken.

EMERGENCY DEPARTMENT (ED) DATA

For tables with emergency department data please note that this data only includes emergency department visits in which emergency department registration occurs and the patient is not admitted for inpatient care at the reporting entity.

ENVIRONMENTAL HEALTH

Water supply and fluoridation data is shown for environmental issues. Various access to healthy food data is included in the report. Recreation and fitness facility data is also included.

HEALTH PROFESSIONAL SHORTAGE AREAS (HPSA) DATA

HPSAs may be designated as having a shortage of primary medical care, dental or mental health providers. They may be urban or rural areas, population groups or medical or other public facilities. Possible types of HPSA Designations in the area include:

Geographic Single County - Where the whole county is designated as HPSA.

Geographic Service Area - Where portions of a county, or portions of multiple counties are designated as a geographic HPSA.

Population Group - Where a population within an area is designated as a HPSA.

Correctional Institutions - Federal and State prisons and youth detention facilities.

Comprehensive Health Centers - Entities receiving Section 330 funds to operate comprehensive health centers.

FQHC Look-a-Like - Federally Qualified Health centers certified as meeting 330 requirements but not receiving grant funds.

Rural Health Clinic - Certified as Rural Health Clinics by the Centers for Medicare and Medicaid Services.

HPSA Scores are developed for use by the National Health Service Corps in determining priorities for assignment of clinicians. Scores range from 1 to 25 for primary care and mental health, 1 to 26 for dental health. The higher the score, the greater the priority. All Federally Qualified Health Centers and those Rural Health Clinics that provide access to care regardless of one's ability to pay, receive automatic facility HPSA designation. These facilities may have an HPSA score of 0.

HOUSEHOLD TYPES

There are various types of households. A household includes all of the people who occupy a housing unit. (People not living in households are classified as living in group quarters.) A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied (or if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and that have direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living quarters.

A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householder's family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than families. A household can contain only one family for the purposes of census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone. For a more detailed explanation please see http://www2.census.gov/programs-

surveys/acs/tech_docs/subject_definitions/2014_ACSSubjectDefinitions.pdf

IMMUNIZATIONS

The number of kindergartners and seventh graders that have been immunized are reported.

INCOMES

Various income data is shown by zip codes and levels from the latest 5-year ACS estimates.

INFECTIOUS DISEASES

Rates for gonorrhea, chlamydia and infectious syphilis, vaccine preventable diseases, and HIV and AIDS cases are shown.

INPATIENT HOSPITALIZATIONS

A general overview of discharges and patient days are shown by Zip Code level. Payor sources for these discharges are also shown for the county residents. The top leading MSDRGs are also shown for the county residents.

INTERNATIONAL STATISTICAL CLASSIFICATION CODES (ICD)

This is the international "standard diagnostic tool for epidemiology, health management and clinical purposes". ICD 9 and 10 codes were used in various tables in this report due to the change from ICD 9 to ICD 10 in October 2015.

LICENSED HEALTH CARE FACILITIES AND PHYSICIANS

Various types of health care facilities that are available in the areas are listed. Dentists and selected types of physicians are also listed.

MEDICALLY UNDERSERVED AREAS & POPULATIONS (MUAS & MUPS) DATA

MUAs may be a whole county or a group of contiguous counties, a group of county or civil divisions or a group of urban census tracts in which residents have a shortage of personal health services. MUPs may include groups of persons who face economic, cultural or linguistic barriers to health care.

Possible types of MUAs & MUPs Designations in the area include.

C = Whole County

T = Census Tract

MUAs And MUPs score is the Index of Medical Underservice (IMU) score. The lowest score (highest need) is 0; And the highest score (lowest need) is 100.

Source. http://bhpr.hrsa.gov/shortage/muadatadict.htm

MENTAL HEALTH

Hospitalizations and Emergency Department (ED) Visits are shown for mental health reasons. MSDRGs 876, 880-883, 885-887, 894-897 are used for hospitalizations. For data up to September 30, 2015, ICD 9 Codes 290-316.99 were used in determining mental health reasons admittance to the emergency department after September 30, 2015, and forward, ICD 10 codes F00-F69 and F80-F99 were used to pull the mental health visits. Involuntary Exam Initiations (Baker Act) data is shown as well for the mental health section. Domestic Violence data is also shown.

POVERTY

The U.S. Census Bureau provides poverty estimates through the Small Area Income and Poverty Estimates (SAIPE). Data shown is for all ages in poverty as well as children under age 18. To compare poverty at the Zip Code level, the ACS estimates are shown for various age groups and various levels of poverty.

SEX / GENDER

According to the CDC sex is defined as an individual's biological status as male, female or something else. Sex is assigned at birth and is associated with physical attributes, such as anatomy and chromosomes. According to the CDC gender is defined as the cultural roles, behaviors, activities and attributes expected on people based on their sex.

SMALL AREA HEALTH INSURANCE ESTIMATES

In previous Small Area Health Insurance Estimate (SAHIE) releases, uninsured was defined from the Annual Social and Economic Supplement to the Current Population Survey (CPS ASEC) and the question was for being covered "Some Time During the Past Calendar Year". With the 2008 release from the Census, the CPS ASEC data was replaced with American Community Survey (ACS) data. The ACS health insurance question asks, "Is this person CURRENTLY covered by [specifically stated] health insurance or health coverage plans?" In 2010, the age group 50-64 was added to the various age group breakouts in the SAHIE. The Census does not recommend comparing the 2008 and newer data to previous-year SAHIE estimates.

UNEMPLOYMENT

The latest unemployment monthly and yearly rates are shown for the county. This data is from the Florida Research and Economic Database.

ZCTAS AND ZIP CODES

The United States Census Bureau collects data by United States Postal Service (USPS) zip codes. Based on zip code data the Census Bureau then aggregates Zip Code Tabulation Area (ZCTAs) from addresses contained within each block. This allows the aggregated data to be converted into areal feature datasets (ZCTAs). For complete information, please see http://www.census.gov/geo/reference/zctas.html.

Below is a table that shows all zip codes in the Lafayette and Suwannee Counties and which zip codes are included in each county.

Zip Code	Primary County	Percent of addresses in County	Post Office Box	Included With Another Zip Code			
Lafayette Zip Codes							
32013 Day	Lafayette	100.0	Yes	No			
32066 Mayo	Lafayette	100.0	No	No			
32008 Branford *	Suwannee	36.1	No	No			
	Suwannee Zip Codes						
32008 Branford	Suwannee	37.9	No	No			
32060 Live Oak	Suwannee	100.0	No	No			
32062 McAlpin	Suwannee	100.0	No	No			
32064 Live Oak	Suwannee	100.0	No	No			
32071 O'Brien	Suwannee	100.0	No	No			
32094 Wellborn	Suwannee	93.5	No	No			
32024 Lake City *	Columbia	7.3	No	No			
32055 Lake City *	Columbia	28.0	No	No			
32096 White Springs *	Hamilton	5.4	No	No			

^{*} These zip codes are partially located in one of the above two counties but are not considered as being its primary zip code. Data for zip code addresses that are partially in one of the two above counties are not available and are not listed in the tables in this appendix.
